iWash EziDebit Integration

Introduction

A number of customers have asked for a way for their POS to support “Unlimited Member” type wash clubs and Imagatec has listened. Imagatec has been able to add EziDebit integration into our iWash Cloud platform, allowing iWash Cloud POS to process successful EziDebit subscriptions and automatically setup prepaid service against the rego returned from EziDebit.

Prerequisites

For EziDebit integration to work correctly, the following prerequisites must be met:

1. Must be an iWash Cloud Customer
2. EziDebit account created
3. EziDebit “payment” form configured
4. Company Website set up to include a link to the EziDebit “payment” form
5. EziDebit API Public Key for eDDR provided to Imagatec
6. “Unlimited Member” business rule provided to Imagatec (ie. unlimited “Basic Wash”)

Important

When requesting the API Public Key for eDDR, let EziDebit know that Imagatec is only reading “GetPayments” and all management/data entry will remain the responsibility of Ezidebit and Ezidebit’s provided systems.

EziDebit may ask the following questions (answers provided):
Q: Is the intention to use a payment retrieval call (e.g. GetPayments) to recall payment information from your Ezidebit account and feed that into your PoS system?
A: This is correct. We will read “GetPayments” once a day and action in our POS based on the responses provided by the Ezidebit API.

Q: Presumably, all existing payment functions will still be used via the Ezidebit portal ongoing?
A: This is also correct. All maintenance tasks and payments will be completed through the Ezidebit web interface/portal.

Once the above prerequisites have been met, Imagatec will then be able to configure EziDebit integration for your iWash Cloud POS.
