

Stripe Terminal

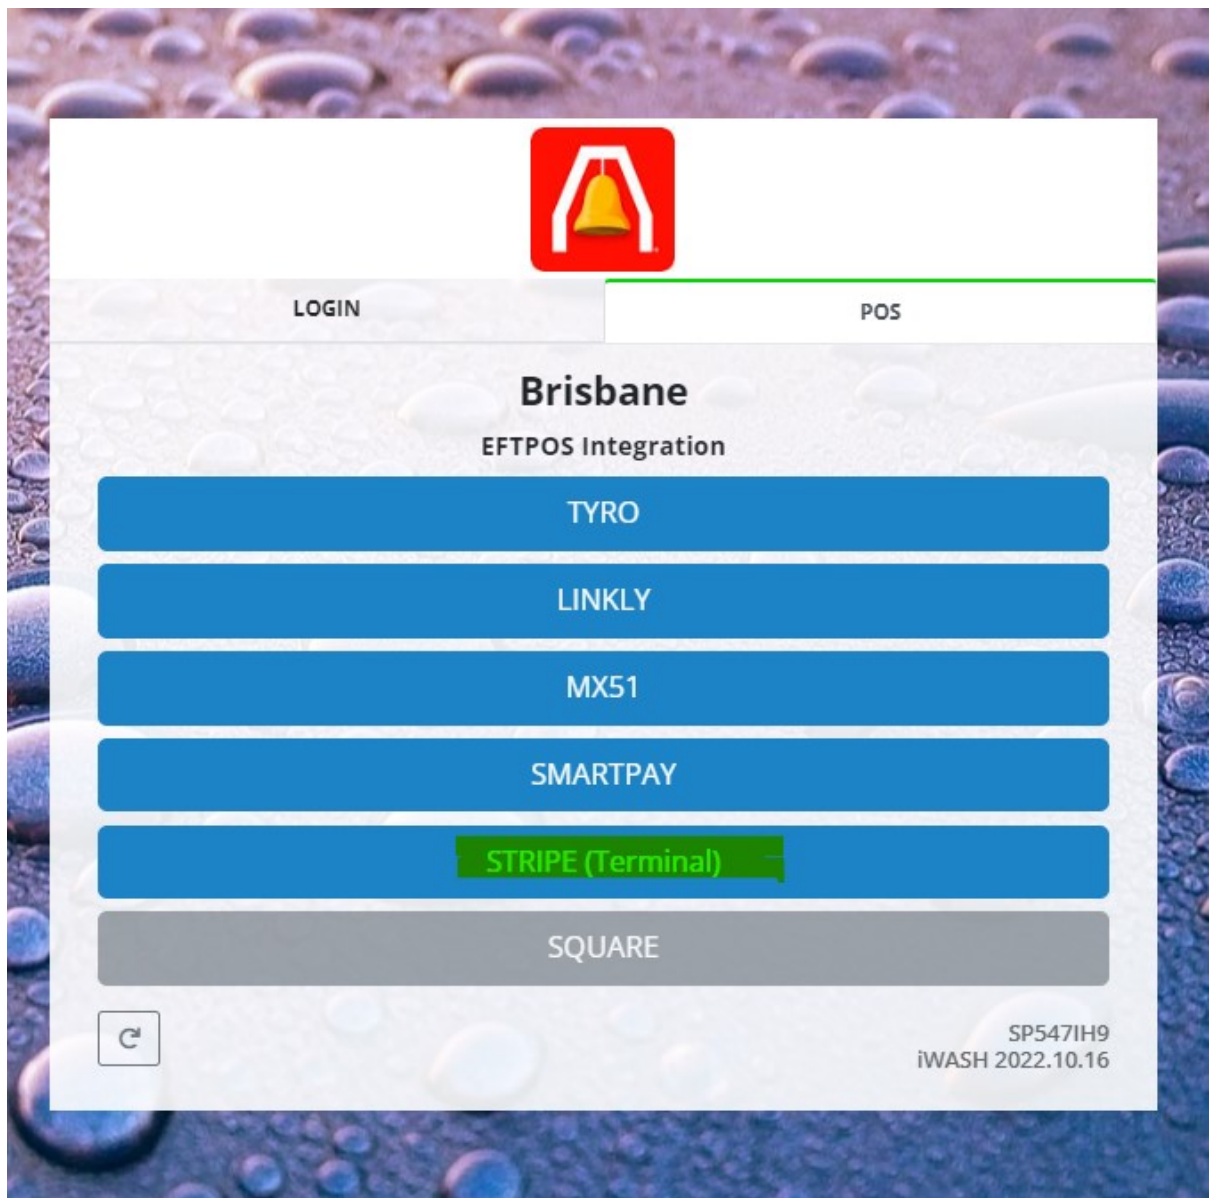

Stripe terminal requires that you have set up your access keys for your account, if you have not already done this, go to [Configuring Stripe Payments](#)

Connecting your EFTPOS Terminal

1. Once you have received your bbpos Wisepos E smart terminal, configure your terminal up to the Pairing Code of the set-up
 1. If you have already configured your EFTPOS terminal to another network, follow [these](#) instructions to generate a new pairing code
2. Go to the POS Login screen with your configured device
 1. If you have not already set up your device, configure your [Cloud POS Device Setup](#)
3. Open the settings button at the bottom

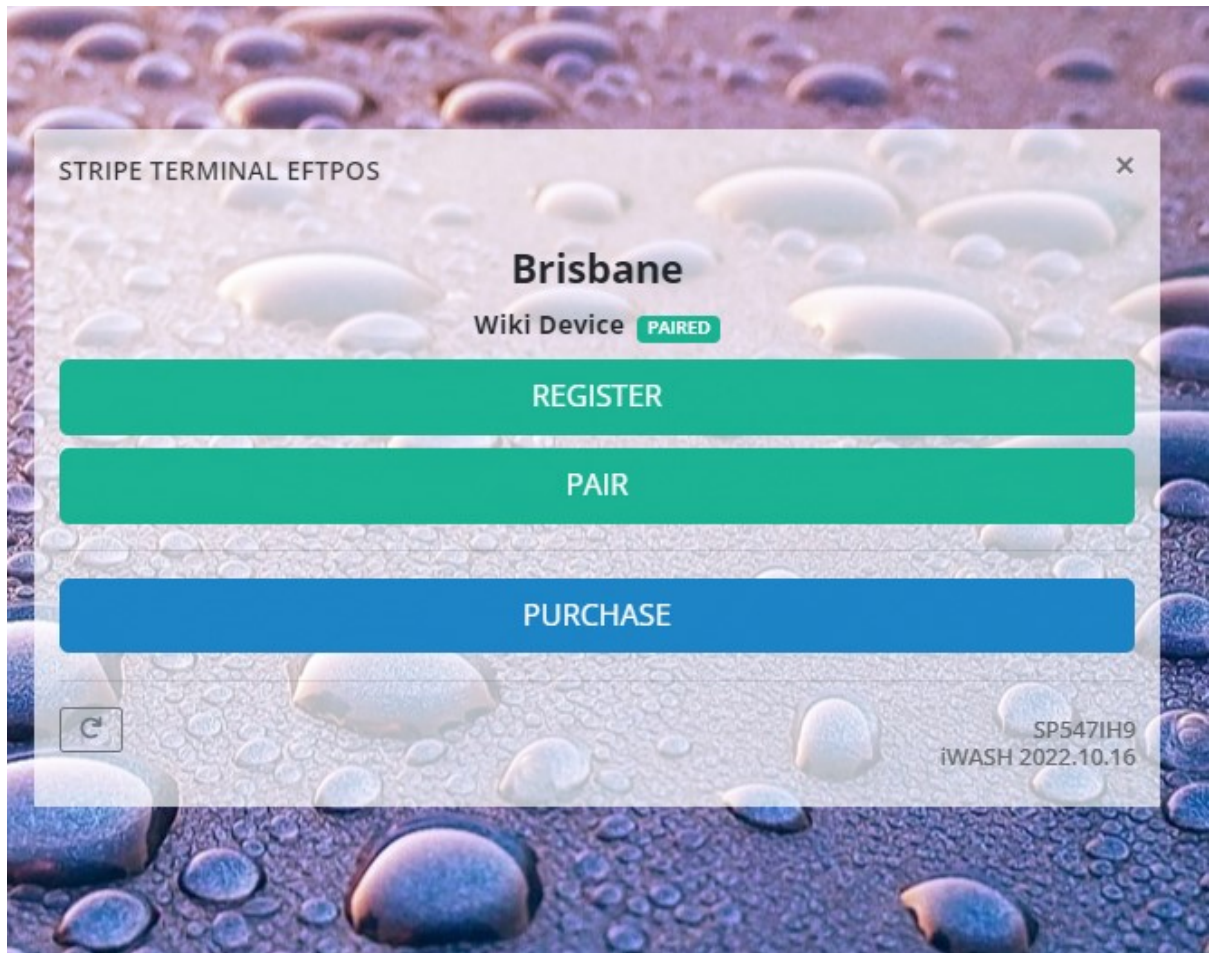

- 1.
4. Select Stripe Terminal

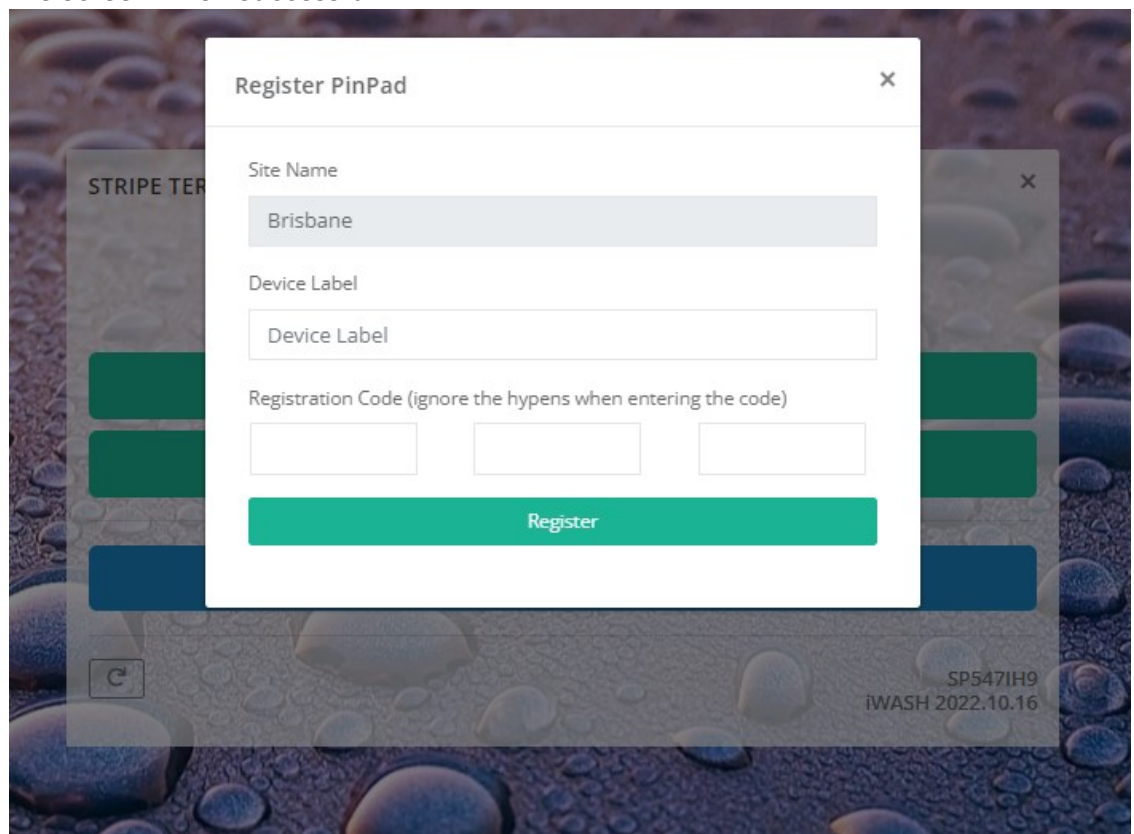

1.

5. First need to select Register to register your device to your account

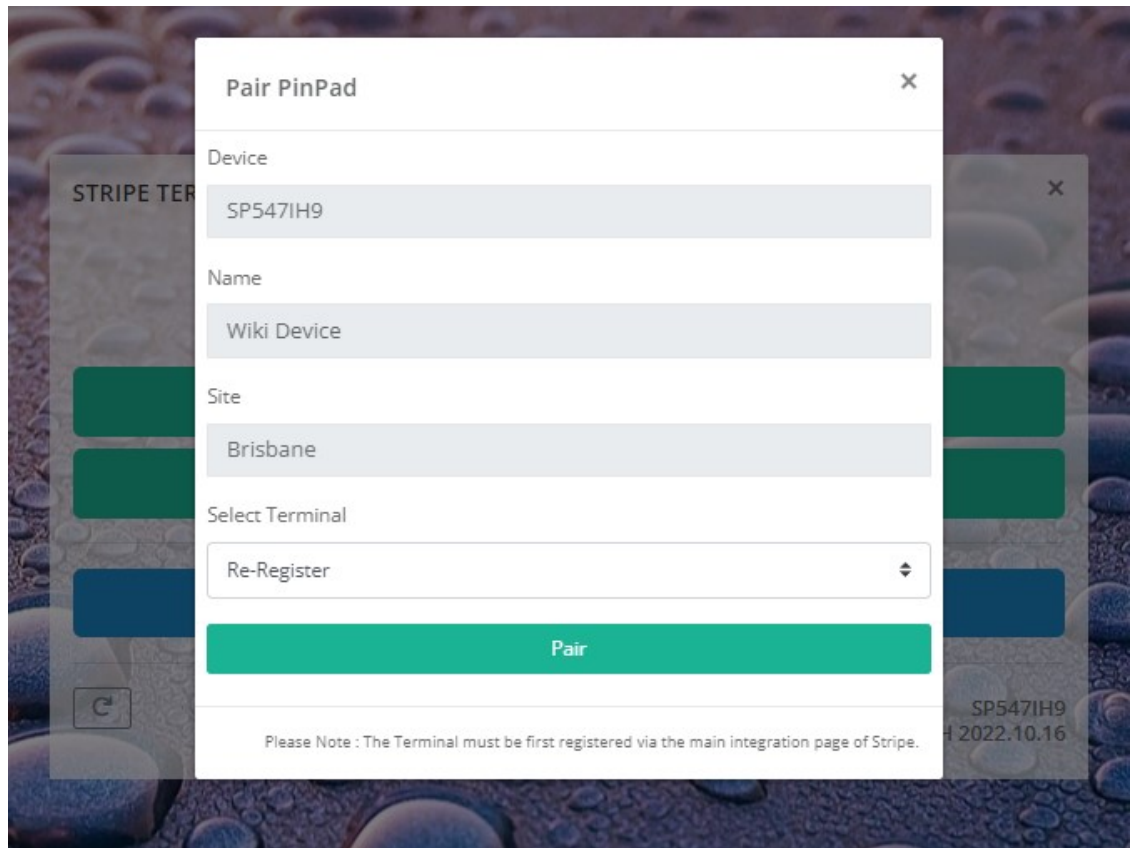

- 1.
2. Enter a label for the device for easy recognition (ie. Front Terminal)
3. Enter the Registration Code which is a series of three words
4. Click Register and a prompt will show that it was successful/not
5. Close the screen when successful

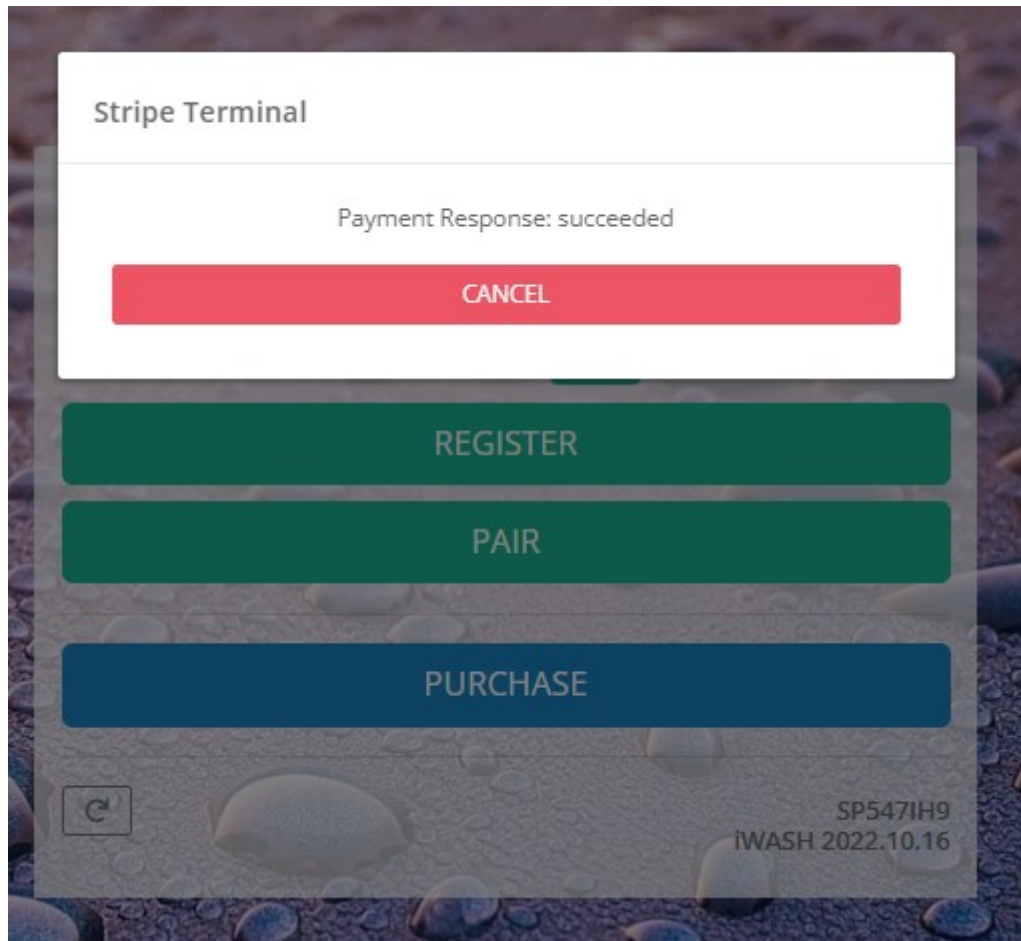

1.

6. Select Pair to select this new terminal for your device

1. Select the device that you want to pair to your device and press Pair and a prompt will show that it was successful/not
2. Close the screen when successful

- 1.
3. To Test your device, select Purchase and enter a amount to charge
 1. On Success, the screen will show payment response was succesful

2.

7. You are now ready to use your new stripe terminal

Troubleshooting your terminal

If you experience any issues with your terminal, Click [here](#) to troubleshoot.
