Global Active : ☒

Point of Sale

Department : 1.10.90.05 Online Deals

Target :

Cost :

Tax Rate : 10 %

Qty :

Price : (use -1 for negative variable prices)

Energy : kJ

Percentage : ☐

Variable : ☐

Child : ☐

Display Order :

Product Code :

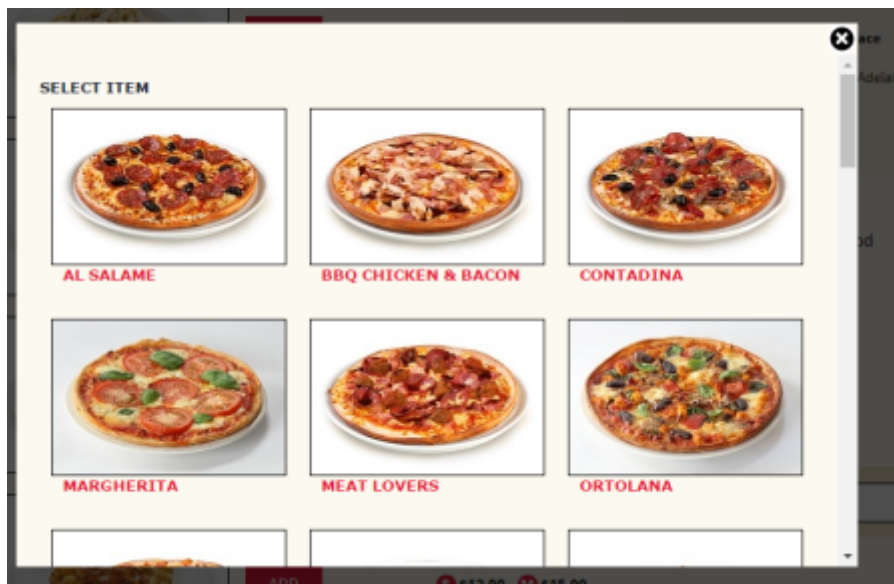

Script :
COMBO = !P1977, !P1977
OLODEAL = *ANYMEAL, !P1977

Tooltip :

Barcodes :

Ensure the POS combo is set-up to match the POS System, followed by the Online Combo (OLODEAL) on the next line of the script type. Online deals look for a Match on the Online Type, so for example:
OLODEAL = *ANYMEAL,GARLICBREAD

For the above example, "ANYMEAL", will be added to the deal at full price, while any product that contains the online type "GARLICBREAD" will be added to the deal inclusive of the Deal Price. If there are no products on the order that contain any of the matching online Types, then the customer just needs to add these products from the list.

Please Note:

1. Key words such as "ANYMEAL" need to be added to any qualifying product's online type that need to be included in the deal. Special Characters such as !, @, #, \$, % cannot be used as they are used in online ordering.
2. **When the "*" is used in front of an Online Type, then the product that will be left at FULL price when added to the deal.**
